How to Buy Your Own Home

Unit 4 Review

Working with numbers

1. Sue Johnson and her mother decided they will need to save some extra money to replace the refrigerator that came with their condominium. Sue normally buys her lunch at work, spending about \$15 a week. How much could she save each month if she takes her own lunch to work instead of buying it?

2. The Millers' older son got an after-school job to help with family expenses. He works an hour after school each day and eight hours on the weekend. After deductions are taken out, his hourly take-home pay is \$3. He has to spend \$6 each week on bus fare to get to and from work. How much money will he earn for the family each week?
